

Use of spectral analysis and Random Field Theory for MEG data analysis

13.10.2016

Butorina Anna

MEG-center, MSUPE,

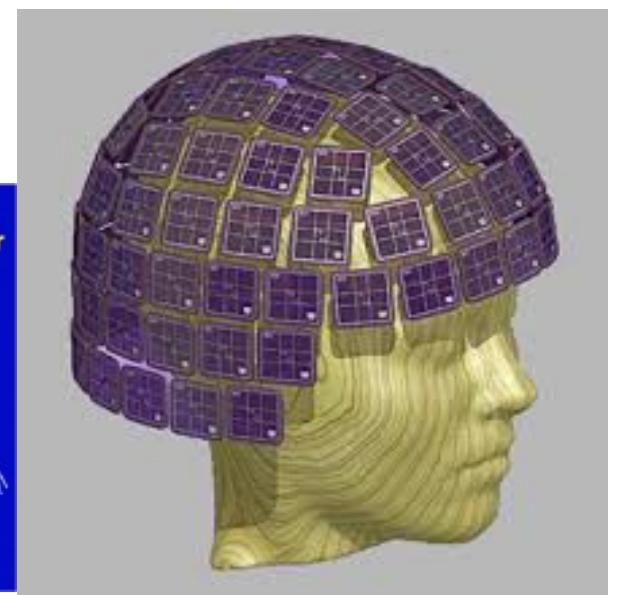

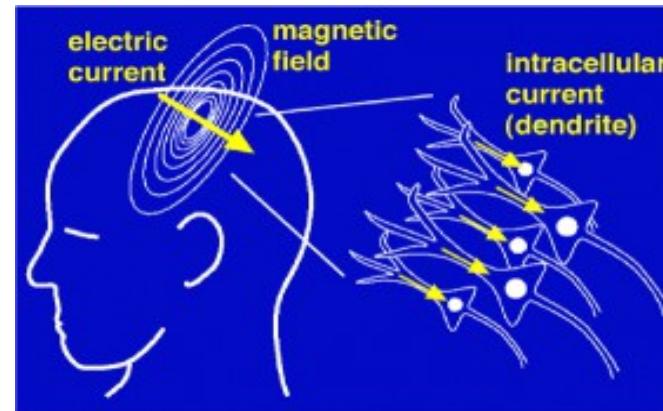

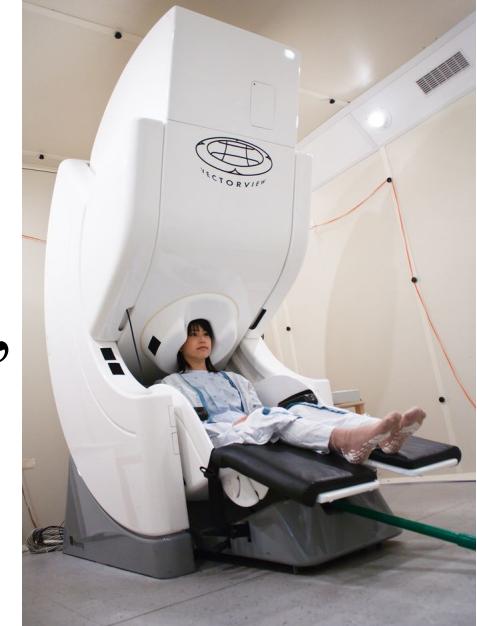

Moscow, Russia

Butorina, A., A. Prokofyev, M. Nazarova, V. Litvak, and T. Stroganova. "The mirror illusion induces high gamma oscillations in the absence of movement."

NeuroImage 103 (2014): 181-191

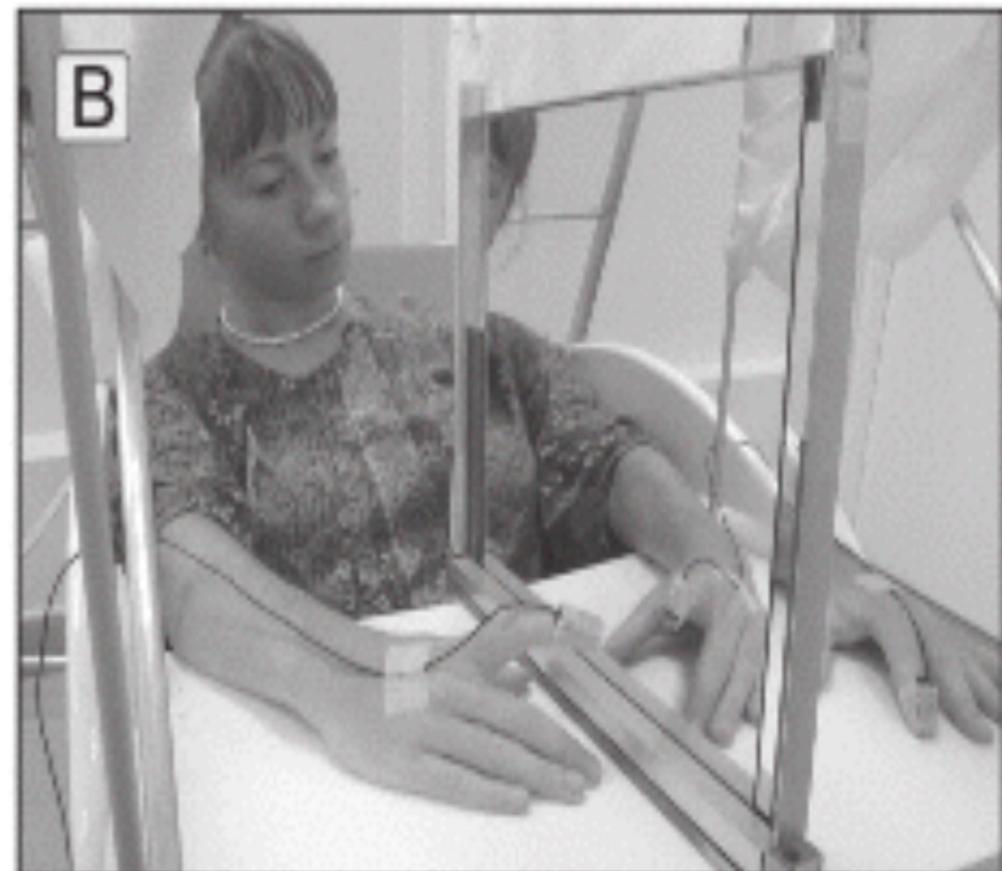

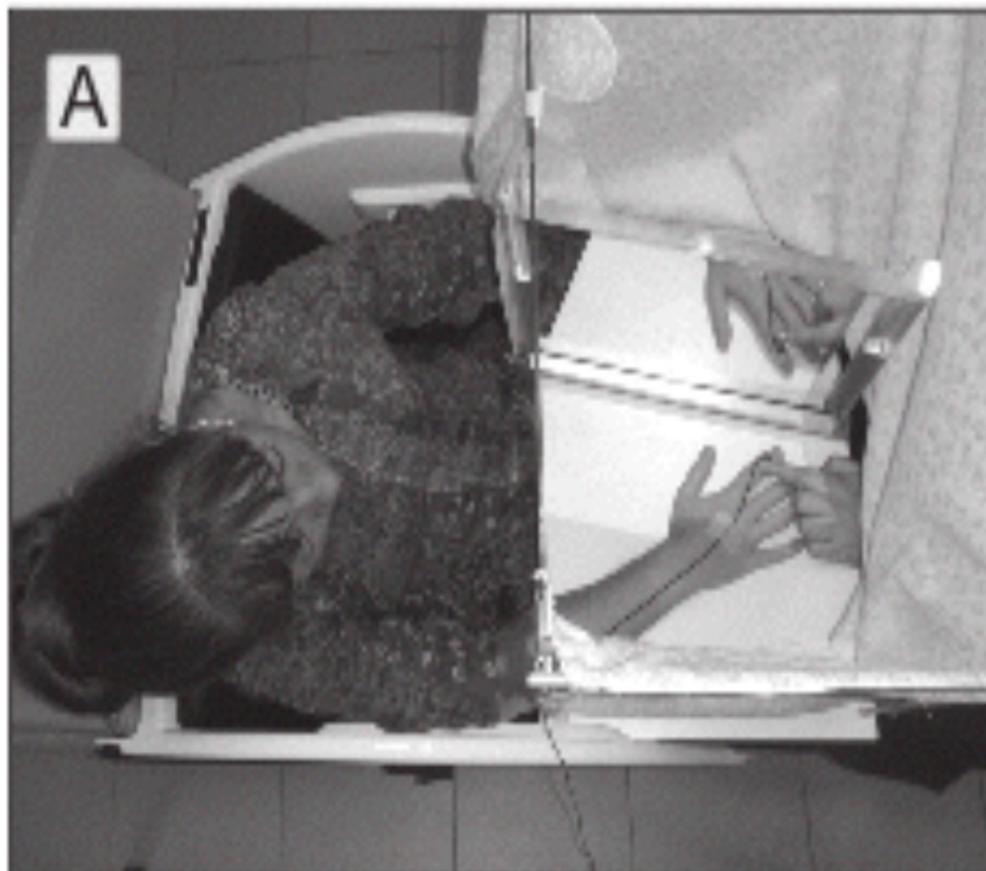

Magnetoencephalography

- MEG data were collected at MEG-center, Moscow
- Elekta Neuromag
- 306 independent measurement channels
- Organized in channel-triplets n 102 silicon chips:
 - two planar gradiometers
 - one radial magnetometer

Mirror hand illusion

Ramachandran, V.S., Altschuler, E.L., 2009. The use of visual feedback, in particular mirror visual feedback, in restoring brain function. Brain 132, 1693–1710.

A lot of activation

TMS: Garry, M.I., Loftus, A., Summers, J.J., 2005. *Exp. Brain Res.* 163, 118–122.

ЭЭГ/МЭГ:

- Praamstra, P., Torney, L., Rawle, C.J., Miall, R.C., 2011. *Cereb. Cortex* 21, 1935–1940.
- Tominaga, W., Matsubayashi, J., Deguchi, Y., Minami, C., Kinai, T., Nakamura, M., Nagamine, T., Matsuhashi, M., Mima, T., Fukuyama, H., Mitani, A., 2009. *NeuroImage* 46, 500–504.
- Touzalin-Chretien, P., Dufour, A., 2008. *J. Neurophysiol.* 100, 19–23.
- Touzalin-Chretien, P., Ehrlé, S., Dufour, A., 2009. *J. Cogn. Neurosci.* 21, 2207–2216.
- Touzalin-Chretien, P., Ehrlé, S., Dufour, A., 2010. *Cereb. Cortex* 20, 2007–2016.

And no specificity

- Fadiga, L., Craighero, L., Olivier, E., 2005. *Opin. Neurobiol.* 15, 213–218.
- Gazzola, V., Keysers, C., 2009. *Cereb. Cortex* 19, 1239–1255.

A cue...

- The functional response properties of high- gamma activity are distinct from ERD and ERS of mu-rhythm in lower alpha (8–13) and beta (15–30) frequencies.

(Pfurtscheller, G., Graimann, B., Huggins, J.E., Levine, S.P., Schuh, L.A., 2003. *Clin. Neurophysiol.* 114, 1226–1236.)

- In ECoG high gamma power (60–90 Hz) responses were found to occur in a more focal topographical pattern.

(Crone, N.E., Miglioretti, D.L., Gordon, B., Lesser, R.P., 1998. *Brain* 121 (Pt 12), 2301–2315.)

- Somatotopically defined regions on the basis of high gamma oscillations in the sensorimotor cortex were consistent with maps generated by cortical electrical stimulation.

(Muthukumaraswamy, S.D., 2010. *J. Neurophysiol.* 104, 2873–2885.; Gaetz, W., Cheyne, D., 2006. *NeuroImage* 30, 899–908.)

MEG recording

- 24 healthy right-handed volunteers
- 3 experimental tasks:

BILATERAL — self-paced brisk extensions of both index fingers without mirror

MIRROR — **right hand** movements **with mirror**

NOMIRROR — movements were performed with the right hand index finger alone. without mirror

- In all the three conditions the subjects were asked to keep their eyes open and to gaze to the left at the left hand index finger
- the results recorded from 204 planar gradiometers were used for analyses

Navigation in sensor space and frequency

SPM12 toolbox (<http://www.fil.ion.ucl.ac.uk/spm>, Litvak et al., 2011)

BILATERAL condition

Spectral analysis for each channel (using Multitaper)

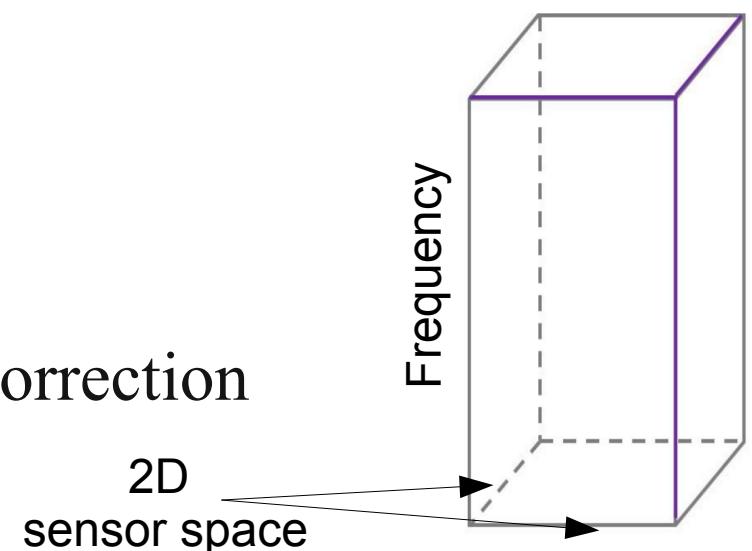

baseline normalization, log-rescale

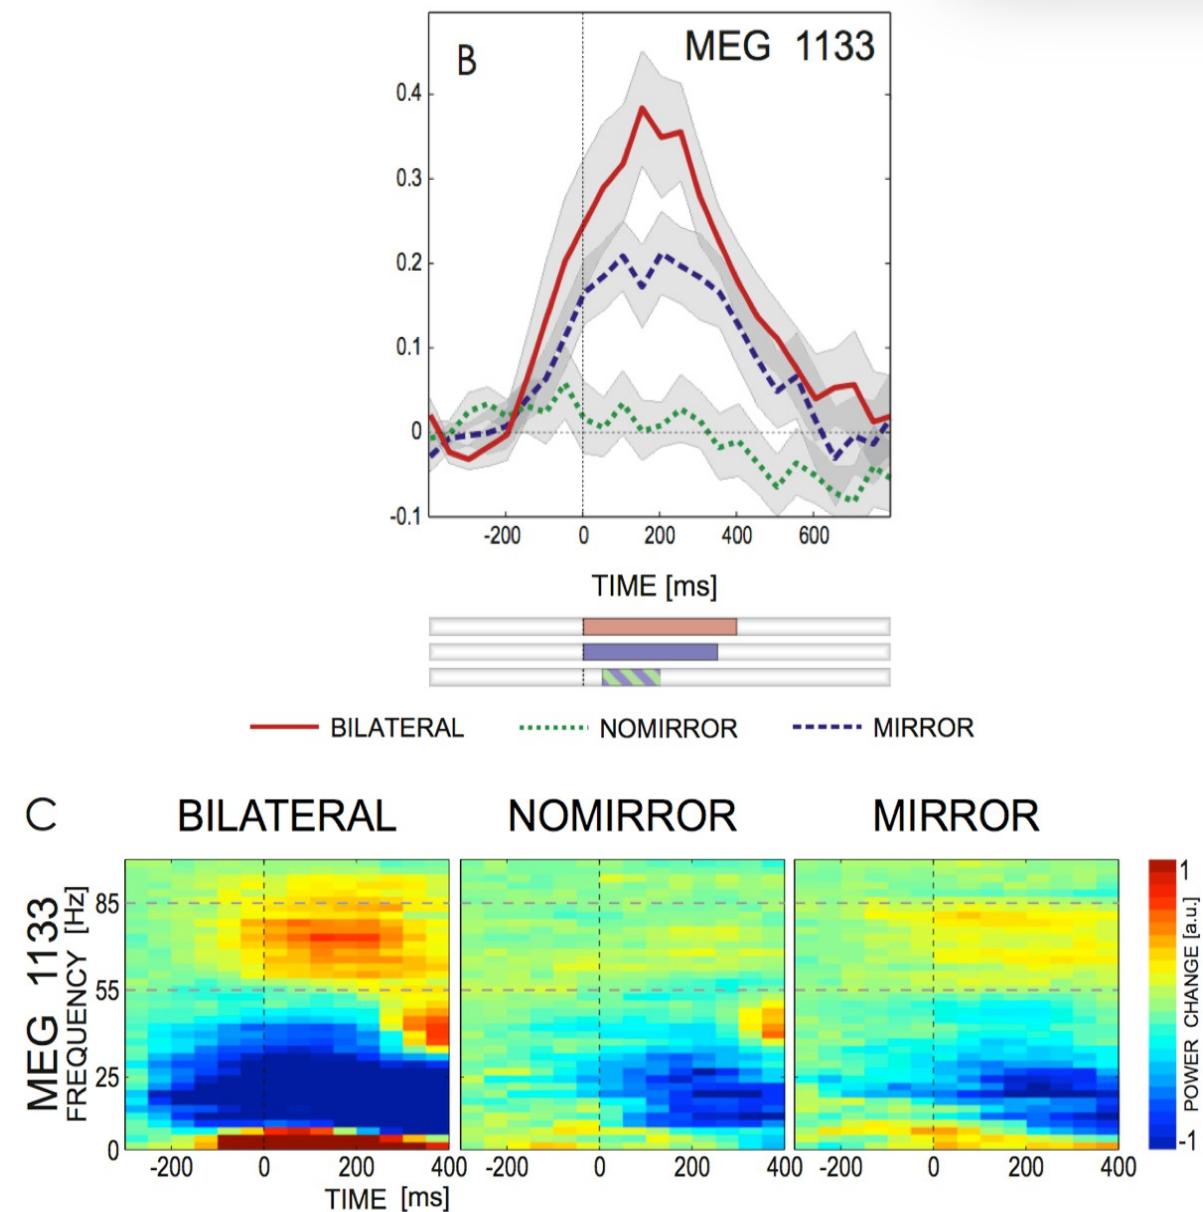

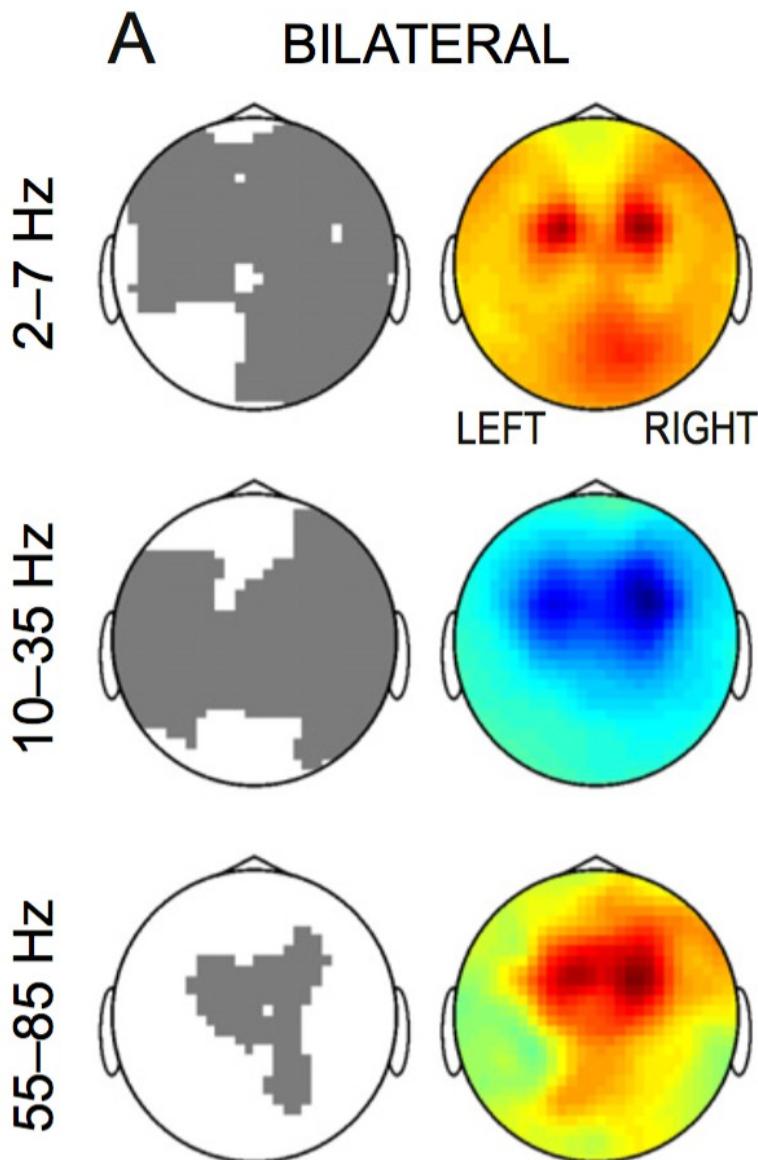

3D space-frequency array

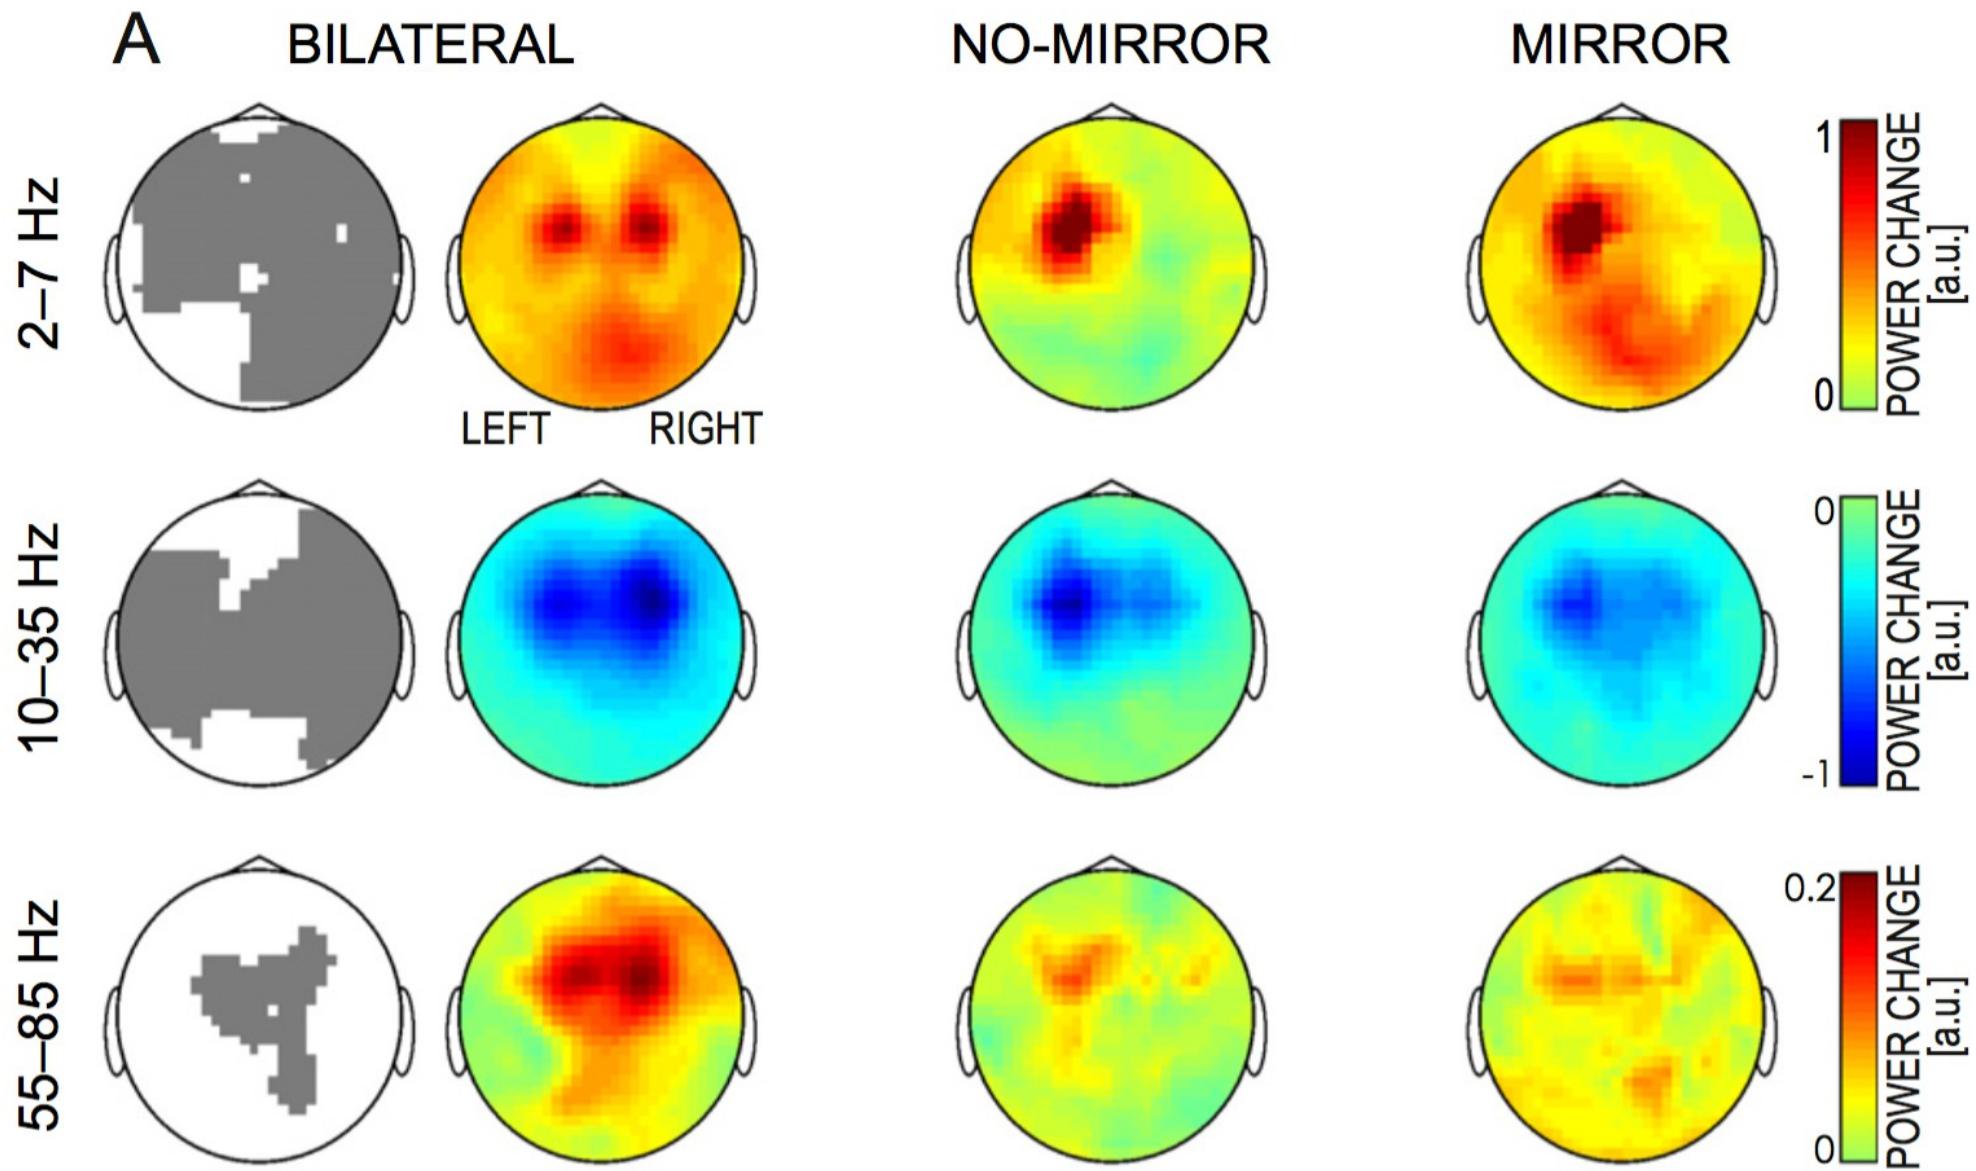

Statistics with RFT multiple comparisons correction

Spatial-frequency analysis

Spatial-frequency analysis

Where it comes from?

- We can hypothesise the existence of wide cross-modal net.
- Nodes:
 - - Frontal neocortex
 - - Sensory-motor area
 - - Visual area
 - - Parietal lobe
